5 myths about AI that refuse to die

ARTIFICIAL INTELLIGENCE · MACHINE LEARNING · DEEP LEARNING

5 myths about AI that refuse to die.

SWIPE ->

"AI thinks like a human." - It finds statistical patterns. No understanding, no intent.

"More data always wins." - Quality, labelling and bias matter as much as volume.

"Bigger model = always better." - Small, well-tuned models win on cost, latency and privacy.

"AI will replace every job." - It automates tasks. The job usually reshapes, not disappears.

"It's magic / it's useless." - It's neither. It's a powerful tool with clear limits.

The people who win aren't the ones who fear or worship AI - they're the ones who learn where it works and where it doesn't.

Which myth have you heard most?
