AI, ML, DL - three terms, one hierarchy

ARTIFICIAL INTELLIGENCE · MACHINE LEARNING · DEEP LEARNING

AI, ML, DL - three terms, one hierarchy.

SWIPE ->

Artificial Intelligence is the big umbrella: any system that mimics human intelligence.

Machine Learning is a subset that learns patterns from data instead of being explicitly programmed.

Deep Learning is a subset of ML that uses multi-layered neural networks to learn complex representations.

Think of it as nesting dolls:

AI ML DL

Every deep learning model is machine learning, and every machine learning model is AI. But not every AI is ML - rule-based chess engines from the 90s were AI too.

Which layer do you work at today?

#AI #MachineLearning #DeepLearning #DataScience
