Transformers: the architecture behind modern AI.

SWIPE ->

"The Attention Is All You Need" (2017) replaced recurrence with self-attention. Instead of reading text one word at a time, a transformer looks at every token at once and learns what to attend to.

That single shift unlocked:

- Parallel training on huge datasets
- Long-range context
- Transfer learning via pre-training
- LLMs that write, code and reason

GPT, BERT, Claude, Gemini - all descendants of the transformer.

If you learn one architecture this year, make it this one.
