Why Deep Learning changed everything.

SWIPE ->

Before deep learning, engineers hand-crafted features. With deep learning, the network learns the features itself from raw data.

A few ingredients made it possible:

- Big data - internet-scale labelled datasets
- GPUs - parallel compute for matrix math
- Better architectures - CNNs, RNNs, Transformers
- Open frameworks - PyTorch, TensorFlow, JAX

A deep neural net is just layers of weighted sums plus non-linear activations, trained with backpropagation and gradient descent.

Simple idea. World-changing results.
